

1 **ABSTRACT OF THE DISCLOSURE**

2 A rotatable shunting socket housing for telecommunication devices
3 includes a body having two sockets respectively defined at two opposite side
4 thereof. Each of the sockets is provided with a plurality of metal feet. A cover is
5 mounted on a side of the body and between the sockets. A connector is rotatably
6 mounted on the cover, and has a plug provided at an exterior side thereof. The
7 plug is perpendicular to the sockets and electrically connected with the metal feet.
8 The body and the cover can be rotated about the connector, and plugs of
9 mounting cords inserted in the can be parallel to a wall, so that the mounting
10 cords are not bent or twisted.
